

DataAccesLayer:

- We added this layer to enable adding a database using SQL, this layer has DALs for every functionality object , a package containing DTOs samely.

Service Layer:

- We added a new class called "ServiceFactory" that combines all of the service layer classes.
- We also added new methods for each class to enable adding the data acces layer

Business Layer:

- We added new methods and edited some of them just to make it compatible with adding a database to our project
